HISTORIC PRESERVATION REVIEW BOARD
APPLICATION FOR HISTORIC LANDMARK OR HISTORIC DISTRICT DESIGNATION

New Designation ______ for: Historic Landmark ______ Historic District x
Amendment of a previous designation ______
Please summarize any amendment(s) ______________________

Property name Emerald Street Historic District
If any part of the interior is being modified, it must be specifically identified and described in the narrative statements.

Address 1307-1377 and 1300-1368 Emerald Street, NE 517-519 13th Street, 518-520 14th Street, NE

Square and lot number(s) Square 1029, lots 73-107, 116-150, 112, 201, 200, 151

Affected Advisory Neighborhood Commission 6A

Date of construction 1892-1923 Date of major alteration(s) n/a Late 19th and 20th century revival

Architect(s) various Architectural style(s) Queen Anne

Original use Single family residences Present use Single family residences

Property owner n/a

Legal address of property owner n/a

NAME OF APPLICANT(S) Advisory Neighborhood Commission 6A

If the applicant is an organization, it must submit evidence that among its purposes is the promotion of historic preservation in the District of Columbia. A copy of its charter, articles of incorporation, or by-laws, setting forth such purpose, will satisfy this requirement.

Address/Telephone of applicant(s) Advisory Neighborhood Commission 6A

Narrative Description
(Describe the historic and current physical appearance and condition of the property. Describe contributing and noncontributing resources if applicable. Begin with a summary paragraph that briefly describes the general characteristics of the property, such as its location, type, style, method of construction, setting, size, and significant features. Indicate whether the property has historic integrity.)

Summary Paragraph

Description of the area and resources of the Emerald Street Historic District

The Emerald Street Historic District is within Square 1029, bounded by F Street, NE on the north, 14th Street, NE on the east, E Street, NE on the south, and 13th Street, NE on the west. Emerald Street is a one-block street bisecting Square 1029 running east to west intersecting 13th Street, NE on the west and 14th Street, NE on the east.

Emerald Street is the product of land use planning by late nineteenth century speculators who transformed Square 1029 from an open space without improvements to a square filled with rowhouse lots, creating Emerald Street as a part of this process, providing circulation and street access essential to maximizing the number of rowhouse lots. Speculators subdivided Square 1029 in April 1892, and quickly sold lots to developers who began building speculative
Emerald Street Historic District

Rowhouses before the end of 1892. By 1896, Emerald Street itself was built out, and building in the Emerald Street Historic District was completed in 1923.

The principal building type is a simple two-story press brick Queen Anne rowhouse, with a full-height square bay, built between 1892 and 1901. In 1923, a row of Colonial Revival, Craftsman-influenced brick porch front houses was built on 13th Street, NE, including 519 13th Street, NE.

Narrative Description

Emerald Street, NE is one-block residential street, 60 feet wide, lined on each side by continuous two-story Queen Anne press brick rowhouses, arranged on a uniform building line. Built between 1892 and 1901, the houses reflect late nineteenth century residential building in Washington, as interpreted by individual architects and rowhouse builders. The rowhouses are generally in good condition, and with the exception of changes to several facades, the street retains the same appearance as during the period of significance.

The following is a description of the buildings in the Emerald Street Historic District.

1300-1338 Emerald Street, NE (lots 131-150) (1892)
These 20 rowhouses were owned, designed, and built on single permit by George P. Newton.\(^1\)
These are two-story, two-bay press brick Queen Anne style rowhouses with a rectangular main block, full-height shallow projecting front bay and rear ell. Set on a solid brick foundation, the brick structure is faced with stretcher-bond brick, capped by a sloped roof, with a molded-metal cornice with brick dentils. There is a single-leaf door with a one-light transom. Window openings have rock-faced concrete lintels and sills, two-course brick string sills, and 1/1 double hung windows. There are two bay and fenestration patterns: Beginning with 1300, and including 1304, 1306, 1310, 1312, 1316, 1318, 1322, 1324, 1328, 1330, 1334, and 1336, the bay corners are chamfered, and the window openings are paired with a fluted pilaster, surmounted by two-course rowlock brick segmental arches with pearl molding. Beginning with 1302 and including 1308, 1314, 1320, 1326, 1332, and 1338, the bays are not chamfered and the window openings are surmounted by rock-faced concrete lug lintels. Vinyl windows have replaced many wood windows. 1308 Emerald Street has casement windows. On 1318 Emerald Street, the first story windows have been replaced by a 30-light wood window.

1309-1331 Emerald Street, NE (lots 73-84) (1893)
These 12 rowhouses were owned, designed, and built on single permit by George P. Newton.\(^2\)
These are two-story, two-bay press brick Queen Anne style rowhouses with a rectangular main block, shallow projecting front bay with chamfered corners, and rear ell, set on a solid concrete and brick foundation. The rowhouses are faced with stretcher-bond brick, capped by a sloped

\(^2\) DC Building permit # 2145 (21 Apr. 1893).
National Register of Historic Places Registration Form

Name of Property           County and State

Emerald Street Historic District                              Washington, DC

roof obscured by a brick parapet composed of a narrow corbelled with brick dentils capped by a
molded metal cornice. There is a single-leaf door with a one-light transom. On the first story,
window openings have concrete lug lintels over a paired first-story window opening with a fixed
sash set above a double-hung sash. There are two fenestration patterns on the second story:
Beginning with 1309 Emerald and including 1311, 1313, 1321, 1323, 1325, window openings
have two-course, rowlock brick segmental arches, and three-course rowlock brick arches.
Beginning with 1315 Emerald Street and including 1317, 1319, 1327, 1329, and 1331, window
openings have two-course rowlock brick segmental arches with header molding. Vinyl windows
have replaced many wood windows. The second story paired window at 1323 Emerald Street
has been replaced with a single-light arched window surmounted by a spandrel, and the second
story window at 1325 Emerald Street has been altered to hold square paired windows
surmounted by a wide vinyl fanlight.

1340-1346 Emerald Street, NE (lots 128-130) (1894)
These four rowhouses were owned, designed, and built on single permit by George P. Newton.3
These are two-story, two-bay press brick Queen Anne style rowhouses with a rectangular main
block, a full-height shallow projecting front bay with chamfered corners, and rear ell, set on a
solid concrete and brick foundation. The rowhouses are faced with stretcher-bond brick, capped
by a sloped roof obscured by a brick parapet with brick dentils capped by a molded metal
cornice. All windows openings have concrete sills complemented with two brick string courses.
There is a single-leaf door with a semi-circular light and transom. There are two fenestration
patterns: at 1340 and 1344 Emerald Street, window openings have paired windows and are
surmounted with two-course rowlock segmental arches with pearl molding. At 1342 and 1346,
window openings are surmounted with two-course rowlock segmental arches with pearl molding.
The first story window at 1340 Emerald Street has been replaced with a 30-light fixed window,
and the second story window with a 20-light fixed window. 1342 Emerald Street has been clad
in permastone.

1307 Emerald Street, NE (lot 201) and 517 13th Street, NE (lot 200) (1895)
These rowhouses are two of five designed by R. S. Smith for Francis S. Carmody, owner and
builder.4 The other three rowhouses are adjacent at 511-515 13th Street, NE. 1307 Emerald
Street is a two-story, two-bay press brick Queen Anne style rowhouse in stretcher bond, with a
rectangular main block and a full-height projecting square bay, and rear ell, set on a solid
concrete foundation. The sloped roof is obscured by a brick parapet wall with a corbelled table
and molded metal cornice. The main entry has a single-leaf door. Window openings contain 1/1
double-hung vinyl windows with rock-faced concrete sills complemented by brick string courses.
Each opening has a soldier brick segmental arch with header molding.

517 13th Street, NE, a corner building, on the corner of 13th and Emerald Streets, borders
Emerald Street along the length of its northern side. It was constructed as a store, and is

3 DC Building permit # 1552 (28 Apr. 1894).
4 DC Building permits ## 1318 (16 Mar. 1895) (1307 Emerald Street, NE), 1260 (8 Mar. 1895) (517 13th Street, NE
and 511-515 13th Street, NE).
City Directory (1930, 1932, 1965) lists the building as a grocery. It is now a private residence. The building is a two-story, two-bay press brick Queen Anne style rowhouse in stretcher bond, set on a solid concrete foundation. The building has a long rectangular form with two recessed bays along the eight-bay deep north (side) elevation, and the corbelled brick table extends across the north elevation as well. The main entry is located on the north elevation, with a double-leaf multipaned door. Window openings hold 1/1 double hung, vinyl windows with rock-faced concrete sills and rock-faced concrete lintels, and a second-story brick sill string course as well as paired brick string courses at upper-sash height. The north elevation has two recessed segments. The first and second bays are recessed, resembling a rowhouse with its single-leaf door with blind transom and soldier brick segmental arch. The fourth and fifth bays are also recessed, with a door opening repurposed to hold a fixed window. These two recessed blocks form what appears to be a projecting full height third bay. Window openings contain 1/1 double hung vinyl sash with rock-faced concrete sills and soldier brick segmental arches. The side elevation features a second-story brick sill string as well as paired brick strings at upper-sash height.

1333-1351 Emerald Street, NE (lots 85-94) (1895)
These 10 rowhouses, on a single permit were designed by C.B.F. Haller for owner/builder Watson J. Newton. These are two-story, two-bay press brick Queen Anne style rowhouses with a rectangular main block, a full-height shallow projecting front bay with chamfered corners, and a pedimented brick parapet with an ovolo-molded metal cornice, and rear ell, set on a solid concrete and brick foundation. The rowhouses are faced with stretcher-bond brick, capped by a sloped roof obscured by a brick parapet composed of a narrow corbelled table with brick dentils capped by an ovolo-molded metal cornice. There is a single-leaf door with transom. Window openings contain 1/1 double-hung windows, with rock-faced concrete sills complemented by brick string courses, and concrete lug lintels. Vinyl windows have replaced many wood windows.

1353-1363 Emerald Street, NE (lots 95-100) (1896)
These six rowhouses, were owned, designed, and built on single permit by George P. Newton. These are two-story, two-bay press brick Queen Anne style rowhouses with a rectangular main block, a full-height canted projecting front bay and rear ell, set on a solid concrete and brick foundation. The rowhouses are faced with stretcher-bond brick, capped by a sloped roof obscured by brick parapet composed of a narrow corbelled table with brick dentils capped by an ovolo-molded metal cornice. There is a single-leaf door with single-light transom. Window openings contain 1/1 double-hung windows. There are two fenestration patterns: 1353, 1357, and 1361 have rock-faced concrete sills complemented with two brick string courses and two-course rowlock brick segmental arches with pearl molding. At 1355, 1359, and 1363 there are concrete sills complemented by brick string sills and rock-faced concrete lintels. Vinyl windows have replaced many wood windows.

6 DC Building permit # 966 (9 Jan. 1896).
Emerald Street Historic District

1348-1368 Emerald Street, NE (lots 116-126) (1896)
These 11 rowhouses, on a single permit, were designed by Nicholas T. Haller for owner/builder George P. Newton. These are two-story, two-bay press brick Queen Anne style rowhouses with a rectangular main block, a full-height canted projecting front bay with molded corners and rear ell, set on a solid concrete foundation. The rowhouses are faced with stretcher-bond brick, capped by a sloped roof obscured by brick parapet composed of a corbelled brick table with brick dentils capped by an ovolo-molded metal cornice. There is a single-leaf door with a single-light transom. Window openings contain 1/1 double-hung windows. There are two fenestration patterns: 1350, 1354, 1358, 1364, and 1366 have rock-faced concrete sills complemented with two brick string courses and two-course rowlock brick segmental arches with pearl molding. 1348, 1352, 1360, 1362, and 1368 have rock-faced concrete sills complemented with two brick string courses and two-course rowlock brick segmental arches with pearl molding. Vinyl windows have replaced many wood windows. 1356 and 1360 Emerald Street have been faced in permastone.

1365-1377 Emerald Street, NE (lots 101-107) (1896)
These seven rowhouses were owned, designed, and built on single permit by George P. Newton. These are two-story, two-bay press brick Queen Anne style rowhouses with a rectangular main block, a full-height canted projecting front bay and rear ell, set on a solid concrete and brick foundation. The rowhouses are faced with stretcher-bond brick, capped by a sloped roof obscured by brick parapet composed of a narrow corbelled table with brick dentils capped by an ovolo-molded metal cornice. There is a single-leaf door with a single-light transom. Window openings contain 1/1 double-hung windows. There are two fenestration patterns: 1365, 1369, and 1371 have rock-faced concrete sills complemented with two brick string courses and two-course rowlock brick segmental arches with pearl molding. At 1367, 1373, 1375, and 1377 there are concrete sills complemented by brick string sills and rock-faced concrete lintels.

520 14th Street, NE (lot 112) (1898)
This corner rowhouse on the corner of 14th and Emerald Streets, borders Emerald Street along the length of its southern side. It is one of four on a single permit designed by Nicholas T. Haller for owner/builder George P. Newton. The other three rowhouses are adjacent at 522-524 14th Street, NE. This is a two-story, two-bay press brick Queen Anne style rowhouse with a rectangular main block, a full-height square front bay and rear ell, set on a solid concrete foundation. The rowhouse is faced with stretcher-bond brick, capped by a sloped roof obscured by a tall brick parapet composed of a corbeled table with brick dentils capped by an ovolo-molded metal cornice. There is a single-leaf door with a transom. Window openings contain 1/1 double-hung vinyl sash with concrete sills complemented by two-course brick strings surmounted by concrete lug lintels. The south (side) elevation has a full-height canted bay capped by a front-gabled pediment with molded cornice. The west (rear) elevation has 1/1 vinyl double-hung windows with concrete sills and a single-leaf wood doors. All openings have two-course rowlock brick segmental arches. A full-height canted bay defines the northern elevation.

---

7 DC Building permit # 1157 (27 Feb. 1896).
8 DC Building permit # 473 (8 Oct. 1896).
9 DC Building permit # 1846 (27 June 1898).
The west (rear) elevation has 1/1 double-hung vinyl windows with wood and concrete sills. A single leaf-wood door has a transom. All openings have segmental arches.

518 14th Street, NE (lot 111) (1901)
This corner rowhouse on the corner of 14th and Emerald Streets, borders Emerald Street along the length of its northern side. It is one of four on a single permit designed by Nicholas T. Haller for owner/builder George P. Newton.10 The other three rowhouses are adjacent at 512-516 14th Street, NE. This is a two-story, two-bay press brick Queen Anne style rowhouse with a rectangular main block, a full-height square front bay featuring a pedimented brick parapet with molded-metal cornice and a fleur-de-lis finial, and rear ell, set on a solid concrete foundation. The rowhouse is faced with stretcher-bond brick, capped by a sloped roof obscured by a molded-metal cornice set above brick dentils. There is a single-leaf door sheltered by an awning. Window openings contain 1/1 double-hung vinyl sash with concrete sills complemented by two-course brick strings surmounted by concrete lug lintels.

519 13th Street, NE (lot 151) (1923)
This corner rowhouse on the corner of 13th and Emerald Streets, borders Emerald Street along the length of its southern side. It is one of four designed by George T. Santmyers for owner/builder Thomas A. Jameson.11 The other three rowhouses are adjacent at 521-525 13th Street, NE. This two-story rowhouse exhibits stylistic offerings from both the Classical Revival and Craftsman. Set on a solid concrete foundation, this brick structure is faced with five-course American bond brick coursing. The sloped roof is fronted by a slate-single false mansard with deep overhanging eaves and scrolled brackets. A false dormer adorns the facade. Clad in slate shingles, the dormer has slate-shingled roof, overhanging eaves, bracket ends and a six-light wood window and interior-rear brick chimney is located on the southeast corner. Located in the northern bay of the facade, the main entry holds a single leaf wood door with transom. Window openings on the facade contain paired 1/1 double-hung vinyl sash and 6/6 double-hung wood sash; all with concrete sills. Soldier brick lintel strings complete the openings. A one-story porch shelters the first story of the facade. Set on a brick pier foundations with decorate concrete block infill, the porch has a flat roof with overhanging eaves, molded metal cornice, and modillions supported by brick columns. Metal balusters encircle the porch. Fenestration of the south elevation consists of 6/6 double-hung wood-sash windows and two-light vinyl sliding windows; all with concrete sills. A full-height projecting bay defines the side elevation, with a hipped roof of slate shingle and carries the overhanging eaves and scrolled brackets featured on the main block. A below-grade garage door has been enclosed.

Integrity

The Emerald Street Historic District retains its original setting as laid out in 1892, and its original design scheme of two-story brick rowhouses, built between 1892 and 1923. The rowhouses retain integrity of materials and craftsmanship, including press brick Queen Anne and

8. Statement of Significance

Applicable National Register Criteria
(Mark "x" in one or more boxes for the criteria qualifying the property for National Register listing.)

- [x] A. Property is associated with events that have made a significant contribution to the broad patterns of our history.
- [ ] B. Property is associated with the lives of persons significant in our past.
- [x] C. Property embodies the distinctive characteristics of a type, period, or method of construction or represents the work of a master, or possesses high artistic values, or represents a significant and distinguishable entity whose components lack individual distinction.
- [ ] D. Property has yielded, or is likely to yield, information important in prehistory or history.

Criteria Considerations
(Mark “x” in all the boxes that apply.)

- [ ] A. Owned by a religious institution or used for religious purposes
- [ ] B. Removed from its original location
- [ ] C. A birthplace or grave
- [ ] D. A cemetery
- [ ] E. A reconstructed building, object, or structure
- [ ] F. A commemorative property
- [ ] G. Less than 50 years old or achieving significance within the past 50 years

Santmyers, George T.
Square 1029 was empty land until it was subdivided into rowhouse lots in April 1892. These rowhouse lots sold quickly and the first rowhouses were constructed later in 1892. Rowhouse construction continued in 1893, 1894, 1895, 1896, 1898, 1901, and the last rowhouse was built in 1923. This period is within the period of significance of the Capitol Hill Historic District (1791-1945).

The Emerald Street Historic District is eligible for listing on the National Register of Historic Places under Criterion C as an example of community planning and development.

Emerald Street illustrates the community planning and architectural significance of one-block streets and Queen Anne press brick rowhouses built for a middle-class market in the late nineteenth century. During this period, a strong economy, a growing middle class of government clerks and men working in construction trades created a demand for housing. Emerald Street in Square 1029 is one of 44 one-block streets on Capitol Hill. Like Emerald Street, many of these streets were created in the 1890s as speculators responded to a demand for rowhouses and sought to maximize profit by creating and selling as many rowhouse lots as possible. By eliminating an alley and replacing it with a one-block street connecting to adjacent streets, speculators could create more rowhouse lots than with an alley layout, and each lot fronted on a public street. In 1797, at the founding of the city, Square 1029 was laid out with 26 large lots, each fronting on an alley and a street. In 1892, speculators bought the entire square and then subdivided it to create 170 rowhouse-sized lots, fronting on 13th, 14th, E, F, or Emerald Street, NE. Figures 1-3. The rowhouse lots sold quickly, at a substantial profit. Speculative developers bought lots and were building rowhouses before the end of 1892, and built out all 71 lots on Emerald Street by 1896.13

Decades later, Emerald Street again illustrated community planning and development as it underwent urban renewal. In 1968, H Street, NE was extensively damaged during the riots following the assassination of Dr. Martin Luther King, Jr. on April 4, 1968. Although Emerald Street itself was not damaged during the riots, it had become run-down and was eligible for urban renewal. DC government moved to rebuild the riot-damaged areas, designating H Street and an adjacent area including Emerald Street as an urban renewal area to be controlled by the DC Redevelopment Land Agency (RLA). Square 1029, including Emerald Street, was spared demolition under urban renewal. Instead, RLA decided to retain Emerald Street as a low-rise residential area, and to rehabilitate houses according to RLA standards. In the 1970s, RLA

---

rehabilitated 39 houses on Emerald Street, and a total of 88 houses in Square 1029. RLA did not alter the facades of the houses.  

The Emerald Street Historic District is eligible for listing on the National Register of Historic Places under Criterion C as an example of architecture for its cohesive and historic building stock that is illustrative of architectural styles popular in the late nineteenth and early twentieth century on Capitol Hill.

Washington has often been described as a red brick city. In the late nineteenth century, brick, and especially press brick (a very strong brick formed under high pressure), was extremely popular in the building trade. Press brick walls with butter joints create a flat, smooth, monolithic appearance which allows for complex surface patterns, and builders could add a variety of decorative elements. Brick was relatively inexpensive, strong, and durable, qualities that appealed to developers during what architect Appleton P. Clark, Jr. called "the press brick period" --

[houses faced in press brick] trim generally of brown stone, or cast iron lintels, window trim, etc. painted to match the stone. Cornices and the trim of mansards, dormers and cupolas were generally of wood. The ornamentation of cut in line patterns of perfectly meaningless lines and shapes was used extensively.

All Emerald Street rowhouses in the Emerald Street Historic District (except 519 13th Street, NE built in 1923) are press brick and representative examples of the press brick period, featuring square or angled bays. While Emerald Street houses were simpler, without cupolas or dormers, architects and builders used the press brick vocabulary to create houses with Queen Anne elements. Judith Capen, AIA describes Queen Anne style as "... variety in pressed brick, and as belt and string coursing ... brick door and window hoods. To enliven the roof line, row houses acquired large and elaborate roof cornices." George P. Newton built most of the rowhouses on Emerald Street. Newton's houses express the Queen Anne style through a corbelled table at the cornice, string courses as window sills, and window openings with wood fluted pilasters, with scrolled spandrels above. Over the door and window openings are brick segmental arches with pearl molding. His houses also feature chamfered corners on the bays, a technique introduced by Cluss & Schulz in 1878, which became very popular. Newton designed most of the houses and architect Nicholas T. Haller designed others.

14 The other areas were Shaw, downtown, and 14th Street, NW. National Capital Planning Commission, Washington Goes Forward 1968-1976 (undated).
Narrative Statement of Significance (Provide at least one paragraph for each area of significance.)

Residential real estate development in Washington
In the early nineteenth century, businesses and residences developed near the Capitol and the Navy Yard. After the Civil War, Washington expanded rapidly. In the 1870s, the territorial government paved roads, installed water and sewer lines and streetlights. Although most of this work was done in the northwest section of the city, where the wealthy elites lived, and development moved quickly, improvements were also made on Capitol Hill. The Organic Act of 1878 obligated Congress to fund one-half of the city's expenses, ensuring that Washington would remain the nation's capital. Civil service reform, enacted in 1883, ended the spoils system, and offered stable employment for federal government employees, including Capitol Hill residents. During this time, business leaders also accepted that the city would never become a manufacturing center, but instead, its economy would be centered on government and real estate, providing work for government employees and members of the building trades. Between 1880, 1890, and 1900 the number of construction firms rose from 251 to 565 to 744, and employment rose from 1,781 to 7,321 to 7,322. Employment in printing and engraving, private and government rose from 2,654 to 4,593, to 7,419 (of which 5,771 were government employees).

In the 1880s and 1890s, Capitol Hill was one of the few areas in the city with affordable land and amenities (nearby commercial areas and transportation). In the 1890s, streetcar service was available between East Capitol Street, H Street, NE and the Navy Yard to downtown. Car barns were built at 14th and East Capitol streets, 13th and D streets, NE and near the Navy Yard. These factors attracted developers and caused Capitol Hill to become a middle-class community of workers in government, the building trades, and small business. After the new Eastern Market opened in 1873, new brick rowhouses were built, primarily two- and three-story houses, for the middle-class market. Development gradually spread eastward. Square 1029 was part of this development; it was vacant land in 1891, but within ten years there were 125 rowhouses.

19 Myers, "Capitol Hill," 280.
22 LeRoy O. King, 100 Years of Capital Traction (Taylor Publishing Co., 1972, 35, 286). The 13th and D streets, NE barn opened in 1895, burned in 1912 and was never rebuilt. DC Inventory of Historic Places (2009), Navy Yard Car Barn (1891), East Capitol Street Car Barn (1896).
23 More affluent residents generally clustered on East Capitol Street, and A and B Streets, NE and SE. Meyers, "Capitol Hill," 280, 283.
When Square 1029 was originally surveyed as part of the L'Enfant Plan, it was divided into 26 lots with an H-shaped 30-foot wide alley running east to west, intersecting at right angles with a 15-foot wide alley running north-south in the center of the square. This narrower alley intersected at a right angle with E and F streets, NE. Figure 1. Before 1892, the square was undeveloped, and was owned by a succession of speculators. As of 1889-1890, Daniel McFarland owned the entire square, still divided into its original 26 lots. McFarland's only other known real estate activity was one mortgage loan. In 1891, Charles S. Dorner, a real estate salesman, owned the square and agreed to sell it for $72,000 to an investment syndicate led by real estate investors William Mayse (1836-1911) and Louis D. Wine (1838-1905). Mayse had served as a captain in an Ohio regiment during the Civil War, and was working as a government clerk in Washington as of 1870. He bought and sold many properties in the late nineteenth century, served as President of the financial firm William Mayse & Co., and also as an officer in an investment company and a streetcar company. He was active in the Grand Army of the Republic, served on a committee of the East Washington Citizens Association, and helped to found a mutual aid organization for government clerks who lost their jobs. Wine worked with the quartermaster's department during the Civil War, and afterwards entered the dry goods business. In 1887, he started a real estate business, and was well-known and active in civic affairs. Mayse and Wine, both arriving in Washington after the Civil War, were typical of a wave of newcomers who began as clerks and entered the real estate business.

Mayse and Wine re-subdivided Square 1029 into 170 lots, enlarging the east to west alley to 60 feet wide, connecting to 13th and 14th streets, creating Emerson Street, later renamed Emerald Street Figure 2. No information could be found on why the name Emerson Street was selected. When Mayse and Wine subdivided Square 1029 they added two ten-foot wide alleys running east to west, north and south of Emerald Street, and eliminating the original north-south alley. They planned to have gas, water, and sewers in place as soon as possible. On E and F streets, lots were 16 or 17 feet wide and 70 feet deep, 1,120 or 1,190 square feet. At the east and west ends of Emerald Street, there were eight lots fronting on 13th and 14th streets, four on each side.

24 DC Real Property Tax Assessment (1889-1890). Daniel McFarland, a dentist, had offices at 1340 New York Avenue, NW in 1871 and 1911, and was likely the owner of Square 1029. "The Legal Record," Washington Post, 24 Dec. 1905, 11.
27 In 1950, the Commissioners planned to change the street's name from "Emerson Street" to "E Place, NE," and scheduled a hearing on the proposed name change. Minutes of the hearing held on March 6, 1950 could not be located. They later decided instead to change the name to "Emerald Street, NE." "District Street Name Changes Ordered," Washington Star, 3 May 1950, 31. NARA RG 351, Records of the Government of the District of Columbia, Minutes, including Orders: 1878-1952, vol.107, pp. 167, 714 (C.O. 940044, 942932, 26 Jan. 1950, 2 May 1950).
of Emerald Street, 16 feet wide and 71 feet deep. The layout of lots is symmetrical, and maximizes the number of building lots. The lots fronting on Emerald Street were the smallest, 16-feet wide, and 64-feet deep, 1,024 square feet. Figure 4. Mayse and Wine followed a pattern set earlier: lots fronting on the one-block street were less deep than lots fronting on the major streets.

As developers began to build rowhouses at each end of Emerald Street on lots 111-112 on the east (14th Street) and lots 151 and 200 on the west (13th Street), these rowhouses formed part of the Emerald Street streetscape (see photographs of the side view of each of these four corner houses). The context for this arrangement of these corner houses on Emerald Street was Mayse and Wine's plan for 16 lots fronting on 13th and 14th Streets, in rigid lines. Eight lots touch Emerald Street and front on 13th Street (lots 69-72 and 151-154), and another eight lots touch Emerald Street (lots 108-115) and front on 14th Street. The dimensions of Square 1029 would have allowed rotating these 16 lots 90 degrees to front on Emerald Street, yielding the same number of rowhouse lots with approximately the same measurements. It may be that having 16 lots fronting on a numbered street instead of on a one-block street provided a more prestigious address, and possibly a higher demand and price for these lots, with no change in the number of lots. This theory appears correct. In 1892, John G. Krohr borrowed $66,000 to buy all 170 lots; the lots fronting on E, F, 13th, and 14th Streets were secured a deed of trust at 0.40 per square foot, but the lots fronting on Emerald Street secured a deed of trust at only 0.29 per square foot. In addition, the real estate tax assessment valued these 16 lots at the same rate as lots fronting on E or F Streets, (at 0.15 per square foot), in contrast to the lots fronting on Emerald Street (valued at only 0.12 per square foot). The four lots on the corners of the square (lots 27, 68, 155, and 196) were valued at the highest rate, 0.20 per square foot. Wine and Mayse followed a practice used by many other speculators as early as 1856, maximizing the number of lots fronting on major streets, which in most cases was done in the first subdivision creating rowhouse lots. However, in a few instances, this process was not completed until a later subdivision. But rotating the 16 lots to front on 13th and 14th streets had a drawback because these lots (69-72,

29 Under the current zoning regulations, a lot must be a minimum of 1,500 square feet.
30 The lots on each end of E Street and F Street could also have been rotated to front on 13th Street and 14th Street, but Wine and Mayse did not do this. DC Recorder of Deeds, deed of trust from John G. Krohr to securing a loan from Watson J. Newton, Liber 1675, p. 147 (4 Apr. 1892). The total purchase price is unknown.
31 The real property tax assessment in 1893-1894 for neighboring Squares 965, 986, 1006, 1007, 1008, 1009, 1028, 1030, 1051, and 1052 followed the same pattern. The larger lots in Square 1030, not yet subdivided into rowhouse lots, were assessed at the lower rate of 0.10.
32 Decatur Street, NE, Square 669 (DC Office of the Surveyor B.72, 1856). Congress Street, NE, Square 748 (DCOS 10/149, 1880). Parker Street, NE, Square 750, plat changed in 1892 to rotate lots to face 2nd and 3rd streets. (DCOS 11/67, 19/74, 1882, 1892). Patterson Street, NE, Square 672 (DCOS 13/178, 1885). Chicago Street, NE, Square 720 (DCOS JHK 99, 1877). California Street, NE, Square 721 (DCOS JHK 113, 1877). Francis Place, SE Square 744 (DCOS 17/80, 1890). Heckman Street, SE, Square 756 (DCOS 17/167, 1890). Callan Street, NE, Square 856 (1869 plat changed in 1887 and 1888 to rotate lots to face 6th and 7th streets, DCOS 15/5, 16/172, 1869, 1887, 1888). Acker Street, NE, Square 861 (DCOS JHK 39, 1877). Wylie Street, NE, Square 1003 (1885 plat changed in 1887 to rotate lots to face 12th Street, DCOS 13/107, 14/185). Linden Place, NE Square 1004 (1886 plat changed in 1887 to rotate lots to face 12th and 13th streets, DCOS 14/131, 15/105). Elliott Street, NE, Square 1028 (DCOS 17/44, 1889). Duncan Place, NE, Square 1008 (DCOS 18/82, 1891). Ives Place, SE, Square 1046 (DCOS 15/160, 1887). 14th Place, NE, Square 1054 (Mayse and Clark, DCOS 18/27, 1890). Orleans Place and Morton Place, NE, Square 855 (DCOS 16/78, 1889).
Mayse and Wine also maximized the number of lots by leaving no space in Square 1029 for green space or amenities; 100 percent of the square was allocated for circulation or building lots. They were following a land use practice on Capitol Hill, where squares were gradually filled in with rowhouse buildings. In addition to maximizing the number of lots, they likely also wanted to maximize the allowable size of bays projecting into public space. By the 1880s, projecting bays were very popular and most residential buildings had them. On streets less than 80 feet wide, such as Emerald Street, bay windows could not project more than four feet, and additional restrictions on the amount of building line front allowed for bays applied to buildings 15 feet wide or less. The lots in Square 1029 were at least 16 feet wide. As a result, Emerald Street developers were free to follow popular fashion and build houses with projecting bays. Earlier, in 1877, changes in building regulations affected the construction materials used on Emerald Street: building regulations favored brick buildings, and required metal cornices in place of wood.

Square 1029 has two ten-foot wide alleys, one paralleling Emerald and E streets and one paralleling Emerald and F streets. In 1892, automobile ownership was relatively uncommon. The earliest private garage in HPO's survey of alley buildings dates from 1901. As late as 1911, it was newsworthy to publish the name and address of individuals owning an automobile, as well as the make and model. However, by 1925, there were 72,482 private automobiles, and auto ownership continued to rise in the 1930s. For these reasons, although Mayse and Wine recognized the need for alley access, they likely never considered automobile access or space for garages. Nevertheless, their plan proved adequate for motor vehicle access, including trash trucks. Their decision on alley width and design was typical of land use planning before

33 DCOS 21/73 (4 Feb. 1895).
automobile ownership became common. As late as 1907 and 1908, Kennedy Bros. created ten-foot wide alleys in Squares 862 and 1056. But in 1911, Harry Kite's subdivision of Square 1031 had 15-foot wide alleys (although the alleys narrowed to ten feet where they intersected with the streets). In 1924, the subdivision creating Bay Street, SE in Square 1112 had 15-foot wide alleys and in 1927, Squares 1093 and 1107 had 16- and 20-foot wide alleys. While Mayse and Wine's alleys allowed automobile access, with lot depths at 64 and 71 feet, and house depths averaging 30 feet, it was (and remains) difficult for homeowners to add garages and still have space in their rear yards for other activities. In 1970, there were a number of wood or metal sheds in rear yards, but only one garage, in the rear of 1364 E Street, NE.\textsuperscript{37} Today, some residents have sheds in the rear.

Mayse and Wine's subdivision of lots was very successful. After subdivision, the rowhouse lots were sold and resold quickly, and in the aggregate were worth more than the $72,000 paid for the entire square. On May 21, 1892, less than two months after the subdivision was completed, 42 lots (lots 27 through 68) sold for $29,484 (or $702 per lot, the equivalent of $119,340 for all 170 lots). There may have been a discount for a bulk purchase of lots, because that same day, three lots (155, a corner lot, and lots 156, and 157) were sold for a total of $3,000 (the equivalent of $170,000 for all 170 lots), and lot 196, a corner lot, was sold for $2,000. If one of the four corner lots was worth $2,000 and the other 166 lots were worth $1,000 the aggregate value of the 170 lots was $174,000 (\((166 \times 1,000) + (4 \times 2,000)\)).\textsuperscript{38} By 1893, 43 different people owned lots in the square.\textsuperscript{39} With only minor changes, Mayse and Wine's subdivision has determined all building in Square 1029. In 1895, Francis S. Carmody re-subdivided four lots at the corner of 13th and Emerald streets (lots 69 to 72) to create five lots (lots 197 to 201 (511-517 13th Street and 1307 Emerald Street)).\textsuperscript{40} Figure 3. Emerald Street was built out between 1892 and 1896, building in the proposed historic district was completed in 1923. Figure 5. Today there are 173 lots in Square 1029.

Mayse and Wine certainly understood that buying an entire square with no improvements was essential for their plan for Square 1029 to succeed. Retrofitting a square that already had alleys and alley dwellings into a one-block street would be costly, and in many instances, probably cost-prohibitive. The problems with retrofitting are illustrated by a case study of Square 512 (4th/5th/N/O streets, NW). In 1906, in the interest of public health, the Commissioners decided to close O Street Alley in Square 512 and replace it with Neal Street, a minor street. This work required removing four brick dwellings, two frame buildings, stables and shacks blocking O Street Alley's access to 4th and 5th streets, and widening the alley by demolishing three brick dwellings, five frame dwellings, and a row of wooden sheds. Figure 6. Property owners were to

\begin{itemize}
\item \textsuperscript{37} Current zoning rules limit lot occupancy to 60 percent in an R-4 zone (now RF-1), or 70 percent with a special exception. DCOS plat for RLA (4 Dec. 1970). One-block streets created later had deeper lots; for example the lots in Squares 1093 and 1107 are 75.87 feet deep. DCOS 86/48 (8 Apr. 1927).
\item \textsuperscript{39} DC Recorder of Deeds, Liber 1675, p. 458 (21 May 1892), lots 156-157 sold by Watson J. Newton to John G. Krohr. DC Real Property Tax Assessment (1893-1894). Wine owned no lots, and Mayse retained a one-half interest in four lots.
\item \textsuperscript{40} DCOS 21/73 (4 Feb. 1895).
\end{itemize}
be compensated for taking their land and buildings, $28,851.20 in the aggregate. The Commissioners had planned to recoup this cost by raising the assessed value of by nearby property owners’ land to reflect the assumed increase in value from replacing an alley with a street. According to Frederick Weller, who studied Washington alleys, few minor streets were created in this way, because a Supreme Court decision overturned the tax assessment scheme and Congress never appropriated funds for alley closing. Today Neal Street, NW in Square 512 is 24-feet wide. Neal Isenstein, the Survey and Wall Check Coordinator in DC Office of the Surveyor agrees that speculators are the key to the development of one-block streets with rowhouse lots.\footnote{41}

Congress encouraged the Mayse and Wine’s venture to close the alley in Square 1029 and create Emerald Street. An 1882 act provided that if all the property owners in a square agreed, an alley could be closed if a new alley way at least equal in area was created. In 1885, all the owners of Square 672, expressly relying on the 1882 law, joined together to create Patterson Street, NE.\footnote{42} It may be that the 1882 law merely ratified an existing practice, because owners were subdividing squares to create one-block streets before 1882.\footnote{43} An 1892 act provided that if all the owners of a square, or the owners of part of a square fronting on public streets agreed, they were allowed to close alleys and convert them to private use if they dedicated at least the same area of land for a public alley. The owners were required to show the new and closed alleys and a new subdivision. Closing and opening alleys was subject to the consent of the Commissioners. In 1894, Congress authorized the Commissioners to extend, widen, or straighten alleys, if the property owners in the square agreed.\footnote{44} In 1892, when Mayse and Wine created their one-block street, Congress restricted the construction of new alley dwellings. After July 22, 1892, no alley dwelling could be constructed unless the alley was at least 30 feet wide, and supplied with sewerage, water mains and light.\footnote{45} On Capitol Hill, no new alley dwellings were built after 1893. One-block streets, not alleys, were the wave of the future.

\footnote{43} Examples include Decatur Street, NE, Square 669 (DCOS B.72, 1856). Chicago Street, NE Square 720 (DCOS JHK 99, 1877). California Street, NE, Square 721 (DCOS JHK 113, 1877). Callan Street, NE, Square 856 (1869 plat changed in 1887 and 1888 to rotate lots to face 6th and 7th streets, DCOS 15/5, 16/16/172, 1869, 1887, 1888). Acker Street, NE, Square 861 (DCOS JHK 39, 1877). Abbey Place, NE in Square 773 was created with the consent of all property owners in 1922, under section 1608B of the District of Columbia Code.

\footnote{45} An act regulating the construction of buildings along alley-ways in the District of Columbia. 27 Stat. 254, (52nd Cong., 1st Sess. 1892).
Emerald Street Historic District
Name of Property                   County and State

Emerald Street developers

George P. Newton built most of the houses in the proposed Emerald Street historic district (62 houses). The other builders were his relative, Watson J. Newton, (10 houses), Francis S. Carmody (two houses), and Thomas A. Jameson (one house). Figure 7.

George P. Newton

George P. (Philip) Newton (1865-1945) was from London, England, where he completed the equivalent of high school, and emigrated to the United States in 1885, and by 1887 was living in Washington. That year George P. Newton, a stenographer, was listed at 802 F Street, NW, and in 1892 was listed at the same address as a builder. He soon entered the real estate business; in 1896 he was a partner in Krohr & Newton, real estate and insurance, at 808 F Street, NW. In 1897, Newton began buying land, building and selling houses. He married Lavinia E. Green in 1891. They had one child, Watson P. Newton, born in 1896. George P. Newton was successful, drove a Cadillac runabout, participated in real estate organizations and temperance societies, and was noted in the society column of the Washington Star; he and his family vacationed in Atlantic City and Ocean City. He went bankrupt in 1906. While the bankruptcy was pending, Newton worked as a builder for other owners. In 1907, he built apartment houses at 1341 and 1347 East Capitol Street for David M. Ogden at an estimated cost of $40,000 each. In 1909, Newton built 150-154 North Carolina Avenue, SE, 16 x 34 feet brick, $3,000. In 1908, he built 140 and 142 North Carolina Avenue, SE for his wife (1908, designed by Nicholas T. Haller). And in 1911, he built houses at 251-259 15th Street, SE, 20 x 33 feet, $3,000 each. He remained active in real estate organizations. As of 1914 was working as a title examiner. Lavinia E. Newton died in 1942 and Newton died in 1945 at the home of his son Watson P. Newton in Euclid, Ohio. He is buried with his wife in Rock Creek Cemetery.

48 DC Building permit # 1983, 12 June 1907. DC Building permit # 2056, 27 Nov. 1909; 367, 31 July 1911. The houses at 257 and 259 15th Street, SE have been demolished.

Section 8 page 23
Newton was a speculative builder. He borrowed to buy land and build houses, giving his lenders a first deed of trust to secure their loan, and sometimes a second deed of trust.\(^{52}\) He then sold the completed houses to buyers, who often assumed the first and any second deed of trust securing Newton's lender, and Newton took back a second or third trust from the buyer securing an installment note payable to him, plus a small cash down payment. Between 1897 and November 1906 he built and sold between 400 and 500 houses in several areas in Washington.\(^{53}\) Newton relied on an architect (Nicholas T. Haller), contractors (carpenters, plumbers), and materials suppliers (bricks, millwork, radiators) to build his houses, from ten to 20 vendors.\(^{54}\)

In 1892, he began building out Square 1029, constructing 16 x 30 feet brick houses at an estimated cost of $2,000 each.\(^{55}\) In 1893, he advertised one of his houses on Emerald Street as two-story pressed brick, six rooms and bath, near the streetcar, offered for $2,700: $200 down and the balance "in small monthly notes."\(^{56}\) His houses on Square 1029 were two-story brick rowhouses, with an ell in the rear, and often with a bay window, but generally no basement. The records for his houses at 1364-1372 E Street, NE built in 1905, indicate that they took seven months to complete. Construction began by digging trenches for foundations, pouring concrete, then laying floor joists, building party walls, installing ceiling joists, laying brick on the front walls, installing purlins and rafters, sheathing the roof, laying flooring, setting partitions and lathing and plaster, trimming. The inspector issued a stop-work order because the first story floor joists were not properly spaced. Work resumed after the spacing was corrected. The inspector also ordered corrections (but no stop-work order) on the depth of the foundation trenches, and when the cornice projections failed to follow the plans.\(^{57}\) After building and selling his houses on Emerald Street, Newton concentrated in other areas, including Tennessee Avenue, NE, Dobbin's Addition (Le Droit Park), and University Park.

Newton kept no financial records and apparently he often had no idea if he was making or losing money on his houses. He recorded amounts paid to contractors and suppliers by notations on the back of the contracts. After that row of houses was completed, he discarded the contracts. He did keep canceled checks and check stubs, which he made available to his bankruptcy creditors. His agents kept track of buyers' payments on installment notes. In fall 1906, Newton realized

---

52\ These loans, secured by a first deed of trust were generally short term, often at five or six percent interest, payable semi-annually, without amortization, with a balloon in three to five years. The mortgages made in 1892 secured by lots in Square 1029, were six percent interest payable semi-annually, without amortization, with a balloon in three years. DC Recorder of Deeds, Liber 1675, pp. 145, 451, 461, 467 (21 May 1892). Apparently the practice was to re-negotiate the loan at the end of the term, with the borrower paying an amount to curtail the original principal. Newton bankruptcy file, referee's report, 9 Oct. 1907. "Level amortization monthly payment" mortgages, the most common modern residential real estate financing, were not generally available until the Federal Housing Administration was created in 1934. National Housing Act, 48 Stat. 1246 (73d Cong., 2d Sess., 1934). www.investopedia.com. Internet; accessed 5 Aug. 2016.

that he had financial problems, and he declared bankruptcy on November 23, 1906. He reported assets of $68,706.74, primarily real estate, and debts of $77,278.27, of which $23,683.27 was unsecured claims primarily related to house construction, and $53,370.00 in secured claims (mortgages on real estate). During the bankruptcy, his creditors argued that he kept no records (or had destroyed them) with the intent defraud them by concealing his financial condition, and for that reason should not be granted a discharge in bankruptcy. The referee approved the discharge in bankruptcy. The bankruptcy was apparently closed out in 1912.  

Newton is an example of many master builders active in late nineteenth century Washington. "Men with little or no experience in finance acquired credit, speculated on building trends, anticipated housing markets, and in the process constructed the majority of nineteenth century Washington's houses and small commercial buildings." Newton, like his contemporary master builders, "went with what they knew," standardized designs, and building houses in rows, achieving economies in labor and materials. Newton designed his first sets of rowhouses himself, 49 built between 1892 and 1896. Beginning in 1896 and through 1901, he engaged Nicholas T. Taller to design 13 houses. Newton selected the popular Queen Anne style for all his houses built between 1892 and 1901. The houses that Newton designed, 1300-1346 and 1309-1377 Emerald Street are very similar: two-story, press brick in stretcher bond, with a shallow projecting bay and ell. He introduced variety by alternating chamfered bay corners, and fenestration. Because the rowhouses he built on E Street, NE in 1905 were completed in seven months, it is certainly possible that his Emerald Street houses also went up quickly. The houses were well-received and sold well.  

Watson J. Newton  
Watson J. Newton, (1848-1913) was born in England, emigrated in 1868, married Ellen J. Black of Lawrence, Mass., and moved to Washington in 1876. They had four children, including Watson P. (Phillip) Newton (1881-1962), who became an attorney and real estate investor in Washington, DC. Watson J. Newton was also an attorney and taught at the Washington College of Law (now part of American University). George P. Newton and Watson J. Newton were relatives and the two families had business dealings. Watson J. Newton held lots in 1893 that George P. Newton later bought and built on. One of the creditors in George P. Newton's bankruptcy was Ellen J. Newton, who had lent him money secured by a deed of trust. Newton & Gillett (Watson J. Newton and Emma M. Gillett) handled George P. Newton's financial matters.  

Francis S. Carmody  

58 Newton bankruptcy file. The court authorized the final payment to the trustee in 1912. It appears that part of the file is missing because there is no document showing the final distribution of assets to creditors.  
Francis S. Carmody (1868-1921) was a general contractor who built a number of apartments and houses in Washington. He advertised a specialization in foundations. He lived in Seat Pleasant, Md. and was active in Maryland politics. In 1895, Carmody subdivided four lots at the corner of 13th and Emerald streets (lots 69 to 72) to create five lots (lots 197 to 201). Figure 3.\textsuperscript{61}

Thomas A. Jameson

Thomas A. Jameson (1885-1932) started out as a carpenter’s apprentice in 1905. He began his career as a builder in Washington, DC in 1913 with the construction of eight row houses at 611-625 4th Street, NE. Over the next 15 years Jameson constructed almost 900 buildings, initially serving as the architect for his own development projects. His motto was "Ask the man who owns one." In 1923, he founded his own real estate company which, in addition to construction and sales, offered general real estate loans and insurance for moderate-income buyers and renters (a vertically integrated enterprise). Jameson often relied on architects L.T. Williams or George T. Santmyers, although he designed some buildings himself. Jameson, like other residential builders in the 1920s, was influenced by the Craftsman movement and the popular demand for bungalows. Gustav Stickley's magazine \textit{The Craftsman}, published between 1901 and 1916, criticized Victorian houses, and popularized the Craftsman style, emphasizing beautiful and visible structural elements, light-filled rooms, porches, dormers, and using earth tone bricks with raked mortar joints to create shadow. Jameson's houses, designed by George T. Santmyers, are beige brick in American bond coursing and raked mortar joints, two rooms deep with porches in the rear, incorporating popular Craftsman elements (porches, light-filled rooms, dormers, and visible eaves).\textsuperscript{62} The houses Santmyers designed for Jameson at 519-523 13th Street, NE (1923) are typical Jameson rowhouses, and similar to Jameson's other houses nearby in Square 1030.\textsuperscript{63}

Architects

Nicholas T. Haller

When George P. Newton needed an architect, he hired Nicholas T. Haller (1855-1917), one of the most prolific architects in Washington. As of 1905, Haller's firm employed several architects: George N. Haller, Thomas E. Haller, and J.K. Smith.\textsuperscript{64} Haller designed several notable buildings in Washington: the Warder Building, 527 9th Street, six stories, brick with arcaded base, horizontally banded upper floors, Romanesque Revival detail (1892), an early elevator building for B.H. Warder, a wealthy Ohio manufacturer of farm implements, who moved to Washington to invest in real estate. Haller's office was in this building. His other designs include: The Luzon (The Westover), 2501 Pennsylvania Avenue, NW, (1896), a prominently-situated Romanesque Revival apartment building. The Lorraine, 1706 S Street NW (1897). The Alice (The Sagamore), 1824 S Street, NW (1903). The American Theater, 102-106

Rhode Island Avenue, NW (1913). Haller designed expensive houses for several clients, including a highly ornamented brick house on K Street, NW (1887, estimated cost: $5,000), a four-story house at 16th and L streets, NW (1888), a ten-room house in Washington Heights (1894), the Mary Hill House, 408 A Street, SE (a three-story Richardsonian Romanesque rowhouse, 1892), a five-story limestone and brick residences at 22nd and Q streets, NW ($10,000 each, 1896). Haller also designed many rowhouses for many different owners across the city, including in LeDroit Park, between 1884 and 1896.  

George T. Santmyers
George T. Santmyers (1889-1960) studied architecture at the Washington Architecture Club Atelier (1908-1912), worked as a draftsman for Harding & Upman, Washington, DC, and began his own practice in 1914. In a 50-year career, his office designed 15,689 buildings; only a few architects designed more than 1,000 buildings. He designed many apartments and hundreds of rowhouses, including many on Capitol Hill, for Thomas A. Jameson and Harry Kite.

Colen Bernard Ferguson (C.B.F.) Haller
Watson J. Newton hired Colen Bernard Ferguson (C.B.F.) Haller (1864-1930), an interior designer, to draw plans for his houses at 1331-1351 Emerald Street (1895). As far as can be determined, Haller sometimes listed his occupation as paperhanger and never held himself out as an architect.

No information could be found on R.S. Smith, who designed Francis S. Carmody's rowhouses.

Demographics
Mayse and Wine's subdivision of Square 1029 attracted their targeted middle-class residents. As of the 1900 Census, the first census after building began in 1892, residents of Square 1029 were 100 percent white and worked in typical middle-class Capitol Hill occupations, many as government clerks. A number of others probably worked at the Government Printing Office, the likely employer of printers, compositors, bookbinders, and pressmen who lived in the square. Two worked in the building trades, a carpenter and an electrician. George P. Newton, who listed his occupation as contractor, lived at 526 14th Street, NE, in a house that he built. Other occupations included policeman, fireman, teacher, insurance agent, grocery clerk, bookkeeper, milliner, and one physician. Almost all working-age residents said that they had been

---

In 1910, all residents were white. When Union Station opened in 1907, residents took advantage of the new employment opportunities, working as engineers and firemen and one as a mail clerk at the railway office. Residents continued to work in the federal government, one operating the elevator at the US Senate, and others as clerks and watchmen, and for the Government Printing Office as printers, bookbinders, pressmen, proofreaders, for the Navy Yard as machinists, and in the construction trades (carpenter, painter, plasterer, electrician). Leo Sommerfield operated his grocery store at 501 13th Street, NE, in the house that he built. One resident worked as a bottler in a brewery; one was a patent attorney, and another was an architect. George P. Newton had moved to 447 Irving Street, NW. Forty-four percent of heads of households owned houses (most with mortgages), and 56 percent were renting.

In 1920, residents continued to work as clerks in the federal government, and in the same types of industrial occupations at the Navy Yard and the Government Printing Office. Two residents worked at the U.S. Shipping Board, a federal agency established in 1916. Residents also worked in retail sales, as streetcar motormen and railroad engineers and firemen. One managed a bowling alley and another a shooting gallery. All residents were white, except African-Americans Eugene E. Weyman, an engineer, his wife Maude F. Weyman, a public school teacher, and her father, William H. Fleming, a porter in a department store. They lived at 1316 E Street, NE, which they owned. They moved before 1930. Forty-seven percent of heads of households owned houses, and 53 percent were renting.

In 1930, all residents were white except for Native Americans Katherine McCuttin age 56, no occupation, born in Arkansas, and Elizabeth McCuttin, age 18, born in Oklahoma, a typist with the US government, who were boarding with a family at 1391 F Street, NE. They moved before 1940. Residents' occupations included government clerk, typist, stenographer, school teacher, machinist, carpenter, plumber, electrician, plasterer, paperhanger, steamfitter, waiter, street railway conductor, and retail sales. Fifty-two percent of heads of households owned houses, and 48 percent were renting.

---

70 City Directory (1913).
In 1940, all residents were white; most of those in the workforce were employed full-time during 1939, and working for the US government as office workers, or for the Navy Yard or Government Printing Office. Residents continued to be employed as retail, construction trade and streetcar workers. There was a slight increase in residents working as truck drivers or auto mechanics. Thirty-five percent of heads of households owned houses and 65 percent were renting.\(^73\)

African Americans began moving to Emerald Street in the 1940s. In 1945, Rev. Catherine Bego moved to 1308 Emerald Street with her parents and six brothers and sisters, where she has lived ever since. Her father worked as a chef in a restaurant on Connecticut Avenue, NW, and worked part-time making ice at the Uline Arena. In 1945, the street was predominantly white, with perhaps three or four African American families. Whites began to move out; some became absentee landlords. As of 1951, Chester W. Hunter, an African American whose family lived at 1324 Emerald Street, was serving in the US Army in Korea.\(^74\) From 1945 to present, people have planted flowers in their front yards. Rev. Bego's mother ordered seed for Joseph's Coat and Elephant's Ear from the Hastings Co. Most front yards continue to be kept up nicely. People sat outside in front, generally on benches left outdoors, and socialized with neighbors. Rev. Bego's mother sat outside, read the Bible, and made quilt blocks, which she sent to an aunt in Georgia to be stuffed and made into quilts. Each of the seven children received a quilt. Her mother also collected donations for the church. In the past, children played in the street: hopscotch, double Dutch, dodge ball, checkers, hide and seek. Children use the street less often now, and there are fewer children. Rev. Bego's family did not use their back yard as much. They and others had sheds. In the 1970s, RLA demolished all sheds on RLA properties to eliminate rodent harborage.

From 1945 through the 1970s, virtually all African American residents attended East Canaan Baptist Church, in a rowhouse at 1301 F Street, NE. An early pastor was Grace Cross, and later, Rev. Dr. Cora A. Davis. There were services on Sunday, Sunday school, and meetings on Tuesday nights. Members did missionary work, going to DC General; giving out food. After East Canaan Baptist Church closed, most joined Purity Baptist Church at 1325 Maryland Avenue, NE; others scattered.\(^75\)

In 1989, five young people said to be involved in drug activities, died. To combat a drug problem in the early to mid-1990s Rev. Bego and others formed the Community Organized in Prayer for Salvation (COPS), and held events on Emerald Street featuring gospel music, prayer, dancing, and testimonials.\(^76\)

In 2016, there are approximately five African American families on the street; as older African American residents pass away, their children sell the houses.

\(^73\) US Bureau of the Census, Population Census (1940, Wash., DC, ED 341).
By the 1950s, Emerald Street was suffering from disinvestment. Between 1950 and 1960 there were 12 foreclosures. In 1971, another house went into foreclosure and two others were cited for insanitary conditions. By 1968, absentee owners outnumbered homeowners. Rev. Bego described the 1968 riots following Dr. King’s assassination as "devastating" to Emerald Street. Four nearby businesses, including Binde's Market at 1300 E Street, NE and the Safeway at 1330 D Street, NE were damaged and never re-opened. The H Street Urban Renewal Area, created to revitalize the riot-damaged area, covered 284 acres. Figure 8. RLA boarded up damaged buildings, purchased fire-damaged, vacant, and abandoned properties, and severely dilapidated buildings on H Street, NE, began new construction of low- and moderate housing, and rehabilitation of existing housing. As part of this program, RLA embarked on a multi-year program to rehabilitate houses on Emerald Street and throughout Square 1029.

RLA’s mandatory residential rehabilitation standards set out detailed requirements for structural components, party walls, fire-resistant construction, air circulation, kitchens, bathrooms, bedrooms, closets, interior stairs, central heating, hot water heater, and 1000 AMPS electric service. "Exterior walls shall provide safe an adequate support for all loads upon them and prevent the entrance of water or excessive moisture." Dishwashers and air conditioning were not required. 79 RLA rehabilitated and sold houses to new owners for $25,000; they had to agree not to resell the houses for at least two years. Two of those families still live on the street: 1307, bought by a school teacher under the RLA program and 1309 Emerald Street, are now rented. Some RLA-renovated houses were reserved for rental to low-income families (public housing). Most displaced families never returned. RLA made loans to some homeowners for renovation, including Rev. Bego and her mother. 80 They believed that the rehabilitation program was supposed to be a grant, but turned out to be a loan, which they repaid.

One-block streets on Capitol Hill

Summary
In the last quarter of the nineteenth century, speculators subdivided squares to create and sell rowhouse lots. Figure 9. New one-block streets, a key element in speculators' plans, created additional circulation within a square, and access to additional new lots, thus maximizing the number of rowhouse lots that could be platted in a square. Most squares are rectangles. Platting a one-block street to bisect the square parallel to the longer sides of the rectangle creates the longest possible street, and maximizes the area for rowhouse lots. California Street, NE in Square 721 was an example. Square 721 is 508 feet long running east to west between 1st and 2nd streets, NE, and 348 feet wide running north to south between E and F streets, NE. California Street ran from east to west and was 508 feet long. 81 Figures 10-11.

There were three primary types of original plats:

(1) the most common, squares with H-shaped or I-shaped alleys and large lots with the alleys and later expanded into one-block streets.
(2) squares originally platted with one-block streets (with large lots), and,
(3) squares platted with one or two lots and without alleys, where a one-block street was created for the first time in a nineteenth-century or early twentieth-century subdivision.

Speculators often based their subdivision and a new one-block street on the original plat, if it allowed creating the most rowhouse lots. However, a square was a blank slate to be subdivided into the maximum number of lots, regardless of its original configuration, as seen in cases where speculators ignored the original plat. (Park Street, NE in Square 987 is an example.) Most one-

81 DCOS JHK 113 (15 June 1877). The southern half of Square 721 was platted with rowhouse lots in 1890. DCOS 17/101 (5 Apr. 1890).
block streets were created during a residential building boom between 1880 and 1900. Figure 12.

(1) Typical progression: H-shaped or I-shaped alley extended into a one-block street
Many Capitol Hill squares were originally laid out with a 30-foot wide H-shaped or I-shaped alley, intersecting with narrower alleys connecting to adjacent streets. One lot generally separated the wider alley from the adjacent streets, as was the case with Square 1029. Figure 1. Subsequent owners transformed some of these squares, extending the line of the alley through to the adjacent streets, creating one-block streets along the alley axis, and wider than the alley. An 1882 act provided that if all the property owners in a square agreed, an alley could be closed if a new alley at least equal in area was created. As noted, in 1885, all the owners of Square 672, expressly relying on the 1882 law, joined together to create Patterson Street, NE. It may be that the 1882 law merely ratified an existing practice, because owners were subdividing squares to create one-block streets before 1882. Examples of alleys widened and extended into one-block streets include:

- Square 669 (North Capitol/1st/O/P/Boundary streets, NE), had a 30-foot wide alley running east to west as surveyed in 1796. William B. Todd and Benjamin W. Warner created Decatur Street in 1856 and 1871.

- In 1796, Square 672 (North Capitol/1st/M/N streets, NE), was originally platted with an H-shaped alley running east to west, but not connecting to adjacent streets because lots 32 and 15 blocked access. In 1886, Walter S. Cox, Francis Winslow, and Augustus Jay, trustees, subdivided the square, creating Patterson Street, NE, running east to west intersecting with North Capitol and 1st streets, NE, closing the other alley legs, and assigning the alley space to adjacent lots.

- Square 674 (K/L/1st/North Capitol streets, NE), as surveyed in 1800, had a 30-foot wide alley running east-west. John W. Star created Fenton Street, 45.10 feet wide, by extending the alley.

---

84 Pickford Place, NE in Square 913 is an exception. Thomas H. Pickford subdivided the square with lots for duplexes. DCOS 22/104 (16 June 1897).
85 Ch. 272, An act to authorize the changing of Alley-Ways in the City of Washington, 22 Stat. 151 (47th Cong., 1st Sess. 1882).
86 DCOS 13/1178, 13/179.
87 Examples include Decatur Street, NE, Square 669 (DCOS B.72, 1856). Chicago Street, NE Square 720 (DCOS JHK 99, 1877). California Street, NE, Square 721 (DCOS JHK 113, 1877). Callan Street, NE, Square 856 (1869 plat changed in 1887 and 1888 to rotate lots to face 6th and 7th streets, DCOS 15/5, 16/16/172, 1869, 1887, 1888). Acker Street, NE Square 861 (DCOS JHK 39, 1877). Abbey Place, NE in Square 773 was created with the consent of all property owners in 1922, under section 1608B of the District of Columbia Code.
90 DCOS 3/674 (14 May 1800).
- Square 675 (I/K/1st/North Capitol streets, NE), was originally platted with a 30-foot wide alley running east to west. In 1871, B.F. Gilbert extended the alley, widening it to 40.2 feet, creating Myrtle Street, NE and altering a previous subdivision of lots.  

- Square 720 (F/G/1st/2nd streets/Delaware Avenue, NE) was originally laid out with a 30-foot wide alley running east to west. In 1877, John H. Sherman created Chicago Street, NE, 60-feet wide, running east to west, with parallel alleys 15-feet wide, and multiple building lots.

- Square 721 (E/F/1st/2nd/ Massachusetts Avenue, NE) was originally laid out a 30-foot wide alley running east to west. In 1877, Walter H. Smith and M. M. Rohrer created California Street, NE, 48-feet wide, running east to west, and subdividing the northern half of the square into building lots. Figure 11. In 1890, B. H. Warder and William H. Barnes subdivided the southern half of the square.

- Square 743 (M/N/1st streets/New Jersey Avenue, SE) originally had a 25-foot wide alley running north to south. In 1811, Thomas Law and Daniel Carroll of Duddington completely changed the square, creating two east to west streets, 40-feet wide.

- Square 750 (I/K/2nd/3rd streets, NE) was originally laid out with a 15-foot wide north to south alley. In 1882, Robert H. Ward, trustee, completely changed the square by creating Parker Street, a 40-foot wide street running east to west, with parallel 10-foot wide alleys and multiple building lots. In 1892, M.M. Warner re-subdivided to add lots facing 2nd and 3rd streets. Figures 13-15.

- Square 773 (L/M/3rd/4th streets, NE) was originally laid out with a 30-foot alley running north to south. In 1922, owners Robert L. McKeever and Earl E. Goss, and trustees James R. Ellerson, Jr. and Alexander M. Gorman extended and widened the alley to 60 feet, to create Abbey Place, NE.

- Square 856 (K/L/6th/7th streets, NE) was originally laid out with a 30-foot wide alley running east to west. In 1869, James N. Callan laid out Callan Street, NE as a 36.83-foot wide street running east to west, with one parallel 12-foot wide alley to the north, and multiple building lots. In 1887 and 1888, the National Capital Investment Co. added a 10-foot wide alley south of Callan Street and additional lots.

---

94 DCOS 3/743 (10 May 1796). In 1943, M Place and Quander Street, SE were closed and incorporated into the Washington Navy Yard. 119/195.
• Square 860 (F/G/6th/7th streets, NE) was originally laid out with a 30-foot wide alley running east to west. In 1879, Harriet B. Coolidge and other owners created Morris Place, NE, 60-feet wide, running east to west, retaining the original 15-foot alley with F and G streets, NE and adding 15-foot alleys parallel to Morris Place, and additional lots.\(^98\)

• Square 861 (E/F/6th/7th streets, NE) was originally laid out with a 30-foot alley running east to west. In 1877, Nicholas Acker created Acker Street, 40 feet wide, running east to west, 10-foot parallel alleys and multiple building lots.\(^99\)

• Square 913 (F/G/8th/9th streets, NE) was originally laid out with a 30-foot alley running north to south. In 1881, the original 20 lots were re-subdivided into 14 new lots, divided among the heirs of William Gunton, and the alley was extended to intersect with F and G streets and was widened to 40.17 feet in 1896. In 1897, Thomas H. Pickford created Pickford Place, NE, with parallel six-foot alleys and multiple lots 29.50 feet wide fronting on Pickford Place, where duplexes were later built.\(^100\)

• Square 987 (B/C/11th/12th streets, NE) was originally laid out with a 30-foot alley running north to south. In 1875, George F. Gulick completely changed the square's configuration, creating Park Street, NE, 55-feet wide, running east to west, intersecting with 11th and 12th streets, NE with parallel alleys and multiple building lots.\(^101\)

• Square 1003 (12th/13th/ H/I streets, NE) was originally laid out with an H-shaped 30-foot alley running east to west. In 1885, the Washington Brick Machine Co. created Wylie Street, NE 44-feet wide, running east to west with parallel 10-foot alleys and multiple building lots.\(^102\)

• Square 1004 (G/H/12th/13th streets, NE) was originally laid out with an H-shaped 30-foot alley, bisected by a 15-foot alley running north to south. In 1880, Bernarat Geir subdivided the square, creating James Street, NE, 47 feet wide, intersecting with 12th and 13th streets on the northern one-third of the square. In 1886, Ida Geir created an entirely new subdivision with Linden Street, NE, a 50-foot street running east to west bisecting the square, with narrower parallel alleys, and multiple building lots. James Street disappeared.\(^103\)

• Square 1008 (D/E/12th/13th streets, NE) was originally laid out with a 30-foot H-shaped alley. In 1891, James M. Stockett and Joseph Batchelder, trustee, created Duncan Place, NE, 60-feet wide, by extending the east to west area of the original alley, creating 10-foot

\(^{102}\) DCOS 4/1003 (4 Mar. 1798). 13/107 (13 June 1885).
wide parallel alleys, and rowhouse lots.\(^{104}\)

- Square 1051 (G/F/14th/15th streets, NE) was originally laid out with a 30-foot H-shaped alley. In 1890, the alley was closed, pursuant to the 1882 act, and a 40-foot wide street, Florence Court (later 14th Place, NE) was created running north to south between F and G Streets, NE, together with rowhouse lots.\(^{105}\)

- Square 1098 (B Street/Massachusetts Avenue/17th/18th streets, SE) was originally laid out with and I-shaped alley running north to south between B Street and Massachusetts Avenue. In 1920, the Acting US Secretary of Labor, for the US Housing Corporation, created Bay Street, SE. running between 17th and 18th streets, SE.\(^{106}\)

- Square 1112 (B/C/18th/19th, SE), was originally laid out with an I-shaped alley. Bay Street, SE running between 18th and 19th streets, SE, was created in 1924 by Louis S. Asher, trustee's agent. In 1935, Stewart Bros., Inc. and National Savings and Trust Co. created Burke Street, SE, running between 18th and 19th streets, SE, over original lots 8 and 24, in the southern part of the square.\(^{107}\)

- 17th Place, NE and 18th Place, NE in adjacent Squares 1093 (7th/18th/B/C streets, NE) and 1107 (18th/19th/ B/C streets, NE) were re-subdivided with building lots in 1927. The squares originally had 30-foot wide alleys.\(^{108}\)

(2) Squares laid out with one-block streets at the founding of the city
Some of the larger squares were laid out with one-block streets and large lots from the beginning, and were later subdivided to add rowhouse lots along the one-block streets. Street names were added later. Examples include:

- Square 673 (North Capitol/1st/L/M streets, NE), as surveyed in 1800, had a 60-foot wide street, later named Pierce Street, running east to west, intersecting with North Capitol and 1st streets, NE.\(^{109}\)

- Square 693 (South Capitol/New Jersey Avenue/Canal/D/E streets, SE), as surveyed in 1795, had 60-foot wide street(later named Ivy Street, SE, running east to west, intersecting with South Capitol Street and New Jersey Avenue, SE.\(^{110}\)

---

\(^{109}\) DCOS 3/673 (27 May 1800).
\(^{110}\) DCOS 3/693 (27 Nov. 1795). Manor Real Estate and Trust Co. changed the direction of Ivy Street, SE in 1907, pursuant to the realignment of rail lines and streets in the planning for Union Station. Public Law No. 122, An Act to provide for a union railroad station in the District of Columbia, and for other purposes. Acts of Congress Affecting the District of Columbia, 57th Cong., 2nd Sess. (1902-1903). DCOS 32/099 (7 May 1907).
• Square 732 (1st/2nd/B/C streets, SE) as surveyed in 1795, had a street 50 feet wide running east to west intersecting with 1st and 2nd streets, SE, later named Carroll Street, SE.\textsuperscript{111}

• Square 1010 (B/C12th/13th streets/Tennessee Avenue, NE), as surveyed in 1801, had a 49.5-foot wide street, later named 12th Place, NE, running north to south intersecting with B and C streets, NE.\textsuperscript{112}

• Square 1015 (B/C/12th/13th streets/Kentucky Avenue, SE) as surveyed in 1796 had a 60-foot wide street, later named Walter Street, SE, running east to west intersecting with 12th and 13th streets, SE.\textsuperscript{113}

• Square 1033 (B/C/14th streets/Tennessee Avenue, NE) as surveyed in 1800, had a 50-foot wide street later named Warren Street, NE, running north to south, intersecting with B and C streets, NE.\textsuperscript{114}

(3) Squares platted without alleys and later subdivided to create one-block streets
Some squares which originally lacked alleys were later subdivided to create one-block streets with narrow parallel alleys and rowhouse lots. Examples include:

• Square 736 (1st/2nd/E/public space, SE) was originally a single lot. In 1890, Archimedes Heckman subdivided the square, creating Heckman Street, 60-feet wide, and lots 1 through 148.\textsuperscript{115}

• Square 744 (N/Alley/1st/Canal streets, SE) was originally laid out as two lots without an alley. In 1890, Charles Gessford created a 25-foot alley, later named Francis Place, SE.\textsuperscript{116}

• Congress Street, NE in Square 748 (L/M/2nd/3rd/ Delaware Avenue, NE), was created by Nathan W. Fitzgerald's subdivision in 1880.\textsuperscript{117}

\textsuperscript{111}DCOS 3/732 (8 June 1795). Carroll Street was closed when the entire square was taken to build the Library of Congress Madison Building. 150/175 (12 Sept. 1966), Map No. 8993 (10 Mar. 1967).

\textsuperscript{113}30/114 G.W. Barkman (26 Apr. 1905). Most of the alley was closed in 1960. 140/106 (6 May 1960).

\textsuperscript{114}DCOS 4/1015 (5 May 1796).

\textsuperscript{115}DCOS 4/1033 (3 Jan. 1800).

\textsuperscript{116}DCOS 3/736. Heckman subdivision 17/167 (2 Sept. 1890). Heckman Street was renamed Duddington Place in 1961. 141/12 (9 Feb. 1961).

\textsuperscript{117}DCOS 3/744 (11 Apr. 1797). 17/80 (27 Feb. 1890). In 1943, Francis Place, SE was closed and incorporated into the Washington Navy Yard. 119/195.

Emerald Street Historic District

Square 931 (9th/10th/K/L streets, NE) was originally a single lot. In 1909, George S. Cooper subdivided the square to create Kent Street, NE, 48 feet wide, and 50 lots.118

Elliott Street, NE in Square 1028 (13th/14th/ F/G streets/Maryland Avenue, NE), 60-feet wide running north to south between F Street and Maryland Avenue NE, was created in created in 1889.119

Corbin Place, NE, a 71.65-foot wide street running east to west in Square 1031 (C/D/13th streets/Tennessee Avenue, NE), two parallel alleys and 68 new 16-foot wide lots were created in 1911 by the subdivision of Louis Coblens and Martin Lauer, trustees. In 1913 and 1914, Joseph B. Bolling and Harry A. Kite re-subdivided to increase the lot width to 17 feet and 18 feet.120

Ives Street, SE in adjacent Squares 1046 and 1065 was created in 1887 and 1900. Square 1046 (13th/14th/ K streets/Georgia Avenue, SE) was subdivided by W. H. Talmadge in 1887, creating Ives Place and building lots generally 20-feet wide.121 Talmadge also subdivided a portion of Square 1065 (14th/15th/K streets/Pennsylvania Avenue, SE) in 1887, but created no street. Robert Stead's 1900 subdivision created a 40-foot wide alley, later named Ives Place, SE and 16-foot wide lots. In 1902, Jesse Rank subdivided other portions of the square, creating lots 15-and 16.67-feet wide.122

Duncan Street, NE, 60-feet wide, in Square 1053 (D/E/14th/15th streets/Tennessee Avenue, NE) was created by William L. Barnes and John L. Weaver, trustees, who subdivided all the original lots in the square (except lots 10 through 12 in the square's northeast corner). In 1900 and 1903, others again subdivided the square, creating additional lots.123

14th Place, NE in adjacent Squares 1054 (C/D/14th/15th streets, NE) and 1055 (14th/15th/B/C streets/ North Carolina Avenue, NE) was created in 1871 and 1890.124

In 1907 and 1908, Kennedy and Davis Co. created Ames Place, NE and 92 rowhouse lots in Square 1056 (14th/15th/ A/B streets/North Carolina Avenue, NE).125

119 DCOS 4/1028 (12 Mar. 1798). 17/44 (20 Nov. 1889). The lots on Elliott Street were reduced from 18 feet wide in 1889 to 16 feet wide in 1896. 18/33 (8 Dec. 1896).
121 DCOS 4/1046 (27 May 1800). 15/60 (9 July 1887).
General pattern to maximize the number and square footage of lots fronting on major streets

As discussed, lots fronting on major streets were generally larger and had higher per-square foot values than lots fronting on one-block streets, and for this reason, lots at each end of the square that could have fronted on the one-block street were rotated 90 degrees to front on the major street instead. Emerald Street in Square 1029 is typical of this pattern. Figure 2. Other examples include Squares 669, 672, 675, 721 (Figure 11), 736, 743, 744, 748, 750, 855, 856, 861, 862, 913, 931, 860, 1003, 1004, 1008, 1010, 1028, 1029, 1031, 1046, 1098, 1051, 1053, 1054, 1055, 1056, 1065, 1093, and 1107. The visual result is a continuous line of house-fronts lining every side of the square. William Mayse's subdivisions of Squares 1054 (1890) and 1010 (1892) follow this same pattern, which he used in Square 1029.  

There is one square on Capitol Hill platted in the nineteenth century where all the lots touching the one-block street front on that street, and not on the adjacent major streets. Park Place, NE, in Square 987 was created in 1875, 55-feet wide, plus parallel alleys 14.10- and 15-feet wide and multiple rowhouse lots, 100-feet deep. Figure 16. Rowhouses were first built in 1878 and continued to be built into the 1880s. Although Square 987 was an outlier in the nineteenth century, it presaged twentieth century subdivisions. Squares platted in the 1920s have large deep lots suitable for garages, 15-foot wide alleys, and are platted like Park Street, for example, Squares 773 (Abbey Place, NE), 1098 (Bay Street, SE), and 1112 (Bay and Burke streets, SE). Figure 17 (Bay Street, SE).

Names of one-block streets

The names of most one-block streets relate to the names of adjacent streets, in alphabetical order. For example, Ames Place, NE in Square 1056 is north of A Street, NE, and Corbin Street, NE is north of C Street, NE. Emerald Street (originally Emerson Street), north of E Street, NE, follows this pattern. But some speculators named streets for themselves: Callan Street, NE (James N. Callan, 1869), Acker Place, NE (Nicholas Acker, 1877), Pickford Place, NE (Thomas W. Pickford, 1897), and Heckman Place (Archimedes Heckman, 1890). Acker Place and Pickford Place have survived, but Callan Street was closed and Heckman Street was renamed Duddington Place in 1961.

126 DCOS 18/27, William Mayse and Allen C. Clark, trustee (14th Place, NE in Square 1054). DCOS 20/45, 12th Place, NE in Square 1010. (15 Nov. 1892).

Verbal Boundary Description (Describe the boundaries of the property.)

All the lots on the north side of Emerald Street, NE (1300-1368 Emerald Street) and all the lots on the south side of Emerald Street, NE (1307-1377 Emerald Street), the two lots on northeast and southeast corners of Emerald and 13th streets, NE (517-519 13th Street, NE) and the two lots on the northwest and southwest corners of Emerald and 14th streets, NE (518-520 14th Street, NE).
Boundary Justification (Explain why the boundaries were selected.)

These boundaries embrace all of Emerald Street, NE, the one-block street integral to William Mayse and Louis D. Wine's 1892 subdivision creating Emerald Street and rowhouse lots in Square 1029. The four lots at the corners of 13th and Emerald streets, and 14th and Emerald streets, represent another integral aspect of their subdivision, maximizing the number of larger, more valuable lots fronting on major streets, part of their plan to increase their profit on the Square 1029 rowhouse lot subdivision. Emerald Street is anchored by four corner houses that are integral to the Emerald Street streetscape and the street's architectural character: 520 and 518 14th Street on the eastern end 519 and 517 13th Street on the western end of Emerald Street. Although these four houses have addresses on the cross streets of 13th and 14th Streets, each of these houses has more frontage on Emerald Street, as the sides of these houses are entirely situated on Emerald Street and form part of the Emerald Street streetscape. 517 13th Street, NE was a corner store anchoring Emerald Street; 520 and 518 14th Street were both built in the same architectural style and by the same builder of most of Emerald Street and act as a visual extension of his concept to the corners of Emerald Street, to form a continuous Emerald Street streetscape stretching from the western end to the eastern end of the street (see photographs of the side view of these four corner houses).
