Chapter 7: LONG-TERM IMPROVEMENTS (2005 – 2025)

The long-term improvements address the missing movements at the key interchanges and provide relief to congestion within the study area and possibly beyond. The next phase of environmental analysis and engineering design of the long-term improvement options could commence at any time. However, the complexity of these options could result in construction starting around 2010 or possibly later. Long-term improvements are focused on the following interchanges and major roadways within the Middle Anacostia River region:

- Pennsylvania Avenue/Anacostia Freeway Interchange,
- Barney Circle improvements,
- 11th Street Bridges/Anacostia Freeway Interchange,
- 11th Street/Southeast Freeway Interchange,
- Boulevard along Southeast Freeway, and
- Park Drive Connector Road.

Among the six locations identified for long-term improvements, there are a total of twenty options discussed in this chapter. A synopsis of how each are defined is as follows:

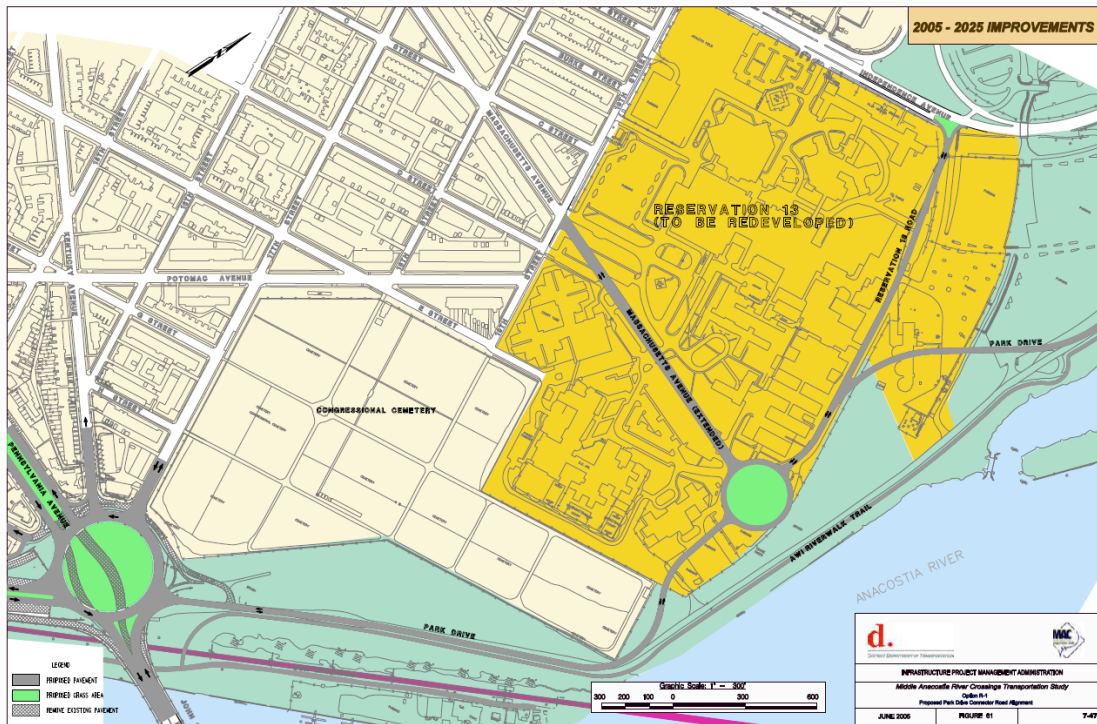

- The Pennsylvania Avenue/Anacostia Freeway Interchange contains six options using the "P" designation.
- Barney Circle improvements include two long-term options and are identified using the "BC" designation.
- The 11th Street/Anacostia Freeway Interchange contains four options and is identified with the "A" designation.
- The 11th Street/Southeast Freeway Interchange contains three options identified using the "SE" designation.
- Four boulevard options along the Southeast Freeway are presented using the "Boulevard" designation. Three typical sections have been developed to illustrate opportunities for the boulevard concepts. The feasibility of which typical sections may be developed is dependent on the option.
- Finally, there is one option for the Park Drive alignment and it is identified using the "R" designation.

Figure 38 provides an index of the locations for the various long-term improvement options. Appendix M contains the geometric data associated with each long-term option.
